

Sticky Stripe™

Algae Resistant PVC Flex Hose

The same great GPH A/R Flex PVC hose with an industry first easy melt welding stripe built in!

Solvent welding PVC is such a common practice in the irrigation field that it has been taken for granted... until a poor weld causes a system failure. Our proprietary catalyst in the orange stripe melts at a lower temperature with a lower viscosity; ensuring a better weld compared to standard hose using using the same welding technique.

P-70 Primer with IPS-795 PVC Solvent Cement recommended for Schedule 40 fitting connections

Our hose flexibility ensures it will not kink, which makes it a perfect fit for high traffic areas. You can bend it and loop it more easily than most tubing on the market. Manufactured from our durable UVR non-rigid PVC resin with a proprietary Algae Resistance package that is compounded into the tubing in the manufacturing process. Algae resistance is particularly important in on grade applications where increased water temperatures provide a host environment for algae growth that can clog emitters.

Features

- Sticky Stripe™ technology helps ensure a better weld
- Constructed from durable, UVR, S-0214 non-rigid PVC blend materials
- Orange stripe makes hose easily identifiable after installation
- Available in 4 different sizes: ½" Irrigation Size (¾" IPS), ½" IPS, ¾" IPS and 1" IPS
- Kink resistant
- Can be installed at or below grade
- PVC Tubing is compatible with schedule 40 slip fittings of the corresponding size when welded or "glued"

Specifications

Shore Durometer - A Scale (ASTM-D676)	Instantaneous: 92 10 second delay: 88
Specific Gravity - (ASTM-D792)	1.44 ± 0.02
Brittleness Temperature - (ASTM-D746)	-22° F
Ultimate Elongation - (ASTM-D4120)	270%
Ultimate Tensile Strength - (ASTM-D412)	2900 PSI

Part Numbers

Part Number	Coil Lengths	OD	ID
GPVCSAR050IRR	500 ft	0.680"	0.500"
GPVCSAR050IPS	100, 200 ft	0.840"	0.560"
GPVCSAR075IPS	200 ft	1.050"	0.750"
GPVCSAR100IPS	100 ft	1.315"	1.000"
